

GUMBA GmbH & Co. KG
Technical Department - Einsteinstraße 15 - 46325 Borken

Company Profile

GUMBA GmbH was founded 50 years ago and has become a synonym for technical competence in all aspects of bridge bearing systems.

The commitment of our staff has given GUMBA trademark status in the construction industry worldwide.

Our engineers and technicians assist consulting engineers and construction companies in the theoretical and practical aspects of selecting the right bridge bearings.

Our efficiency extends far beyond the design and production of elastomeric bearings.

We are able to offer systems designed to support vertical loads up to 20,000.00 kN and horizontal loads up to 3,000.00 kN.

Our production Range comprehends the following products:

1. Reinforced elastomeric bearings according EN 1337-3
2. Restraining structures EN 1337-8
3. Guide bearings and horizontal load bearings EN 1337-8
4. Pot bearings according EN 1337-5
5. Spherical bearings according EN 1337-7
6. Sliding bearings
7. Adjustable bearings
8. Sliding bearings for incremental launching
9. Customized designs like bearings for uplift forces etc.
10. Expansion Joints

Despite a growing internationalisation, the decision to manufacture our products only in Germany has been proven correct. **"Made in Germany"** is still recognised worldwide and appreciated for high quality products.
